PRODUCTS OR MACHINERY

Glass wool is effective in global warming prevention. Approximately 30% of Japan's energy consumption is accounted for by the residential and commercial sectors and of this, a further 70% of the energy consumption in the residential sector is used in heating, air conditioning and the supply of hot water. Decreasing this energy consumption will have an important impact on the reduction of CO2 emissions, and therefore on preventing global warming. The use of insulation will help Japanese households to curb their electricity bills and reduce expenditures on power generation and electricity equipment.

Company Profile of **MAG Isover Saint-Gobain**

A service of glasssglobal.com, an affiliate of glasssglobal group.
