PRODUCTS OR MACHINERY

Our offer comprises 3 areas:

We offer in the Hot End our HiPERFORM solutions:

- NNPB lightweight process
- Process Control
- Assortment production (multi weight)
- Servo feeder
- IS-Maschinen
- Ware handling
- Servo pusher
- Lehr loader
- Mould design
- Variables and parts

We offer in the Cold End our HiSHIELD solutions:

- Inspection and sorting machines
- PlantPilot Information System
- SmartLine Servo star wheel machine

We offer a wide range of services within our HiTRUST portfolio:

- Expert services from plant audit to production support
- Project management for glass plants and modernisations
- Technical assistance to improve plant efficiency
- Training center and on-the-job-training in glass plants
- Glass making expertise since 1799

COMPANY BACKGROUND / HISTORY

Quality and Innovation in glass engineering technology

At Heye International, our goal is very simple: to be the leading supplier of expert services & solutions and high performance equipment to the container glass industry.

For more than 50 years we have set the standard in container glass technology. Our reputation for quality and innovation has been established by developing high-productivity machines & equipment together with sophisticated glass production technologies, and by building a team of highly skilled engineers and technicians.

Heye has extensive knowledge of the day-to-day issues of glass manufacturing. We specialise in the engineering and construction of complete glass container manufacturing plants and enjoy a worldwide reputation in the transfer of high-performance technologies and manufacture of high-performance machinery.

We meet the needs of the modern glass industry by continuously developing new and associated technology, equipment and production systems, such as the NNPB lightweight production process which has set the standard in light-weight containers. In addition we deliver innovations in the automation of cold end quality control. We also provide know-how and equipment for the conventional manufacture of container glass.

Our expertise has been developed worldwide through the completion of, and ongoing consultancy collaborations with, modern glass plants on five continents. From complete glass plant to technical assistance during production, from high speed equipment in Hot End to secure inspection in Cold End, we are deeply involved in the process we understand.

We install factories to the highest levels of technical quality which operate at peak economy. Our comprehensive services comprise the complete planning and engineering process, the selection & supply of the most suitable equipment for each individual project and supervision of the construction and commissioning phases. We even train personnel in the most important areas of plant operation, so that our clients' own workforce is equipped to manage key positions in the new factory!

We analyse local raw materials in order to formulate the best and most economic batch for use and provide our partners with moulds manufactured in our affiliated mould shops.
